

APLGO Product Call - NEW RAPID RESULTS KIT

BRN + GRW + GTS + HPR + HPY + MLS + NMN + RLX + SLD + STP

By Mary Esther Gilbert, MSc HN, BSc NSP

With Tina McMullen Malsom, U.S. Master Rep & Ambassador

October 12, 2026

"Built for anyone who wants to feel better fast, support their wellness from every angle, and start a business with all the benefits! This powerful kit brings together 10 of our most popular products to help you think clearer, feel stronger, stay balanced, and perform at your best." Tina McMullen Malsom

1. The Rapid Results Kit focuses on why the drops are more RAPID than traditional supplements.

- This is due to APLGO's proprietary **Acumullit SA Technology**. The lozenges are produced at APLGO's manufacturing facility in Chişinău, Moldova, Russia.

APLGO drop lozenges are made using this state-of-the-art phytonutrient and plant cell components extraction and ionically charged activation process.

The Manufacturing Process

- **Botanical Extraction:** the state-of-the-art extraction process simulating an electrically charged lightning storm triggers the activation and increased antioxidant value of the botanical compounds from whole foods, fruits, herbs, and seeds.

Allows the health beneficial properties of the whole food botanical ingredients to be preserved and enhanced.

- **Nano-Particle Isolation:** The Acumullit SA process thins the cellular membranes of the plant cell walls to isolate nano-sized particles of the beneficial botanical active components:

- Plant cell inner components (organelles):
 - DNA genetic codes
 - Mitochondria energy production
 - Protein-manufacturing
 - Nutrient transport

[Molecular Expressions 2015](#)

- **Thinning of Membranes:** The process causes a targeted thinning of the cellular membranes within the fruits, herbs, and seeds.

- **Release of Components:** This structural change triggers the direct release of primary botanical components—including micro/macro elements, phytonutrients, bioflavonoids, and organic acids—rendering them more bioavailable.
 - **Creation of the Activated Mixture:** These isolated particles form negatively charged nano-elements, creating an activated, highly absorbable nutrient mixture. [\[1\]](#)
 - **Final Integration:** This nutrient-rich plant mixture is then introduced into a caramel mass to manufacture their signature lozenge drops.
- **Ionization:** The isolated particles form negatively charged nano-sized-elements, creating a highly absorbable, bioavailable, enzyme-active, electrically charged (negatively charged ions) mixture.

2. Bio availability: up to 99% of the drop's contents are absorbed sublingually, for fast nutrient delivery and rapid absorption into the body's cells.

- Unlike many nutritional supplements that one must swallow, the drops contain no synthetics or chemicals or casings that reduce nutrient bioavailability.

The phytonutrient-rich lozenges dissolve in the mouth and enter the bloodstream directly through the mouth's mucosal membrane, lining the inside of your mouth.

<https://www.pharmapproach.com/buccal-and-sublingual-routes-of-administration-advantages-and-disadvantages/>
<https://www.sciencedirect.com/topics/neuroscience/oral-mucosa>

How the process works:

1. Rapid Dissolution in Saliva

When you place the lozenge in your mouth, your saliva quickly breaks down the drop. This dissolves the phytonutrients into a highly concentrated liquid solution right inside your oral cavity.

2. Passive Diffusion Through the Mucosa

The lining of the mouth is very thin, highly permeable, and packed with a dense network of tiny blood vessels (capillaries). Because the concentration of phytonutrients is high in your saliva and low in your blood, the molecules naturally pass through the thin mucosal membrane via **passive diffusion** to balance things out.

3. Direct Entry into Systemic Circulation

Once the phytonutrients cross the mucosal membrane, they enter the capillaries immediately. From there, they travel directly into the deep lingual or facial veins, moving straight into the main bloodstream.

Why This Method of Rapid Nutrient Delivery is Highly Effective

- **Bypasses the Digestive System:** Unlike swallowed capsules, these nutrients do not have to endure the harsh, highly acidic environment of your stomach or the digestive enzymes in your intestines. The dissolved drop enters the systemic circulation directly while bypassing the gastrointestinal tract and hepatic first-pass metabolism of the liver.
- **Avoids the "First-Pass Effect":** Swallowed supplements are absorbed by the gut and sent straight to the liver via the portal vein, where the liver filters and metabolizes a large portion of the nutrients before they ever reach the rest of your body. The drops solution in the mouth completely bypasses the liver, ensuring higher bioavailability.
- **Faster Onset:** Because the nutrients skip the hours-long digestive pipeline, they begin entering your bloodstream within minutes.
- Once absorbed into the bloodstream, nutrients travel through the circulatory system, where **chemical signaling and metabolic demand dictate their final destination.**

Note: Any portion of the lozenge or saliva that you accidentally swallow during the process will simply be processed the traditional way, through your gastrointestinal tract.

3. Why APLGO put the Rapid Results Kit together.

- To demonstrate how well nutrient synergy and energy-active plant compounds work together at the micro cell level to bring the fastest results.
- The botanicals in each product work together to produce more synergistic effects due to making available the **greater array of diverse phytonutrients** to the various body systems.
- The chart below indicates the vast variety of phytonutrient plant complexes in the botanicals in every drop formulation that address the nutrient needs of every body system, where ***greater combinations of botanical plant compounds create a more effective, synergistic effect*** for sooner results.
 - [See the list of the great variety of phytochemical compounds contained in each botanical and drop formulation in the Rapid Results Kit in this video slide show.](#)
- Rather than claiming any medical implications, for many decades, thousands of scientists around the world have shown the **corrective effects of potent cellular nourishment** by:*
 - Mitigating oxidative stress and DNA damage**, preventing premature aging and tissue deterioration.
 - Restoring mitochondrial homeostasis**, lowering cellular fatigue and suppressing risks of cardiovascular and neurodegenerative conditions.

- iii. **Activating immune cell autophagy or cellular clean-up**, correcting tissue and cellular dysfunction from the inside out.
- iv. **Modulating immune cell and epigenetic gene expressions--all nutrients are signaling molecules on cell receptor sites** that:
 - Regulate DNA for directing body system actions.
 - Correct autoimmune triggers such as inflammatory cytokines.
 - **Directly correct underlying mechanisms of various conditions**, including Type 2 diabetes and macular degeneration.
(Mohajeri, 2023) (Maduro, 2021) (Newsholme, 2021) (Cheng, 2021) (Phillips, 2026) (Longo, 2022).

**The Vast Variety of Different Phytonutrient Plant Complexes in the Rapid Results Kit
Provide a Greater Synergistic Effect for Various Body Functions Than One Lozenge Alone**

4. What all the drops in the kit have in common:

- a. The great range of phytonutrients/phytochemicals in every botanical and synergistic formulations of every drop have been shown to improve cellular functioning in every body system:
 - i. Freeing the body to do its **correct cellular work** toward better, or optimal system functioning, including **improving cell energy production** and therefore raising one's **sustained energy levels**.
 - ii. **Detoxifying** – safely eliminating circulating toxins (antigens) and stored pollutants in fatty tissues, keeping the body's eliminative channels and circulatory system clear of plaques, metabolic wastes, and cellular debris.

The Body's 5 Main Eliminative Channels:

Lymph Nodes and Lymph
Vessels
Kidneys

Lungs
Bowels – Lower Intestine
Skin

- iii. **Repairing damaged cells and their malfunctions** – correcting DNA genetic code sequences that get disordered and damaged from:
 - Pollutants, ingesting synthetic ingredients.
 - Consuming distorted molecules in processed foodstuffs.
 - Alcohol
 - Drugs
 - The body's own biochemicals it produces under mental and physical stress reactions.
- iv. Aiding the cells in producing and regulating the **actions of hormones** that are produced by the endocrine (glandular) system.
- v. Aiding the cells in regulating and attenuating the **immune cell responses**.
- vi. Playing critical roles in **proper cell replication and maintaining DNA** gene code sequence integrity for maintaining youthfully-behaving cells, organs, tissues, and structures.
- vii. Maintaining, improving better **brain and nerve communication** functions.
- viii. Preventing or correcting **immunomodulatory reactions** – improving immune responses, improving responses to physical and mental stress.
- ix. Improving the communications between the brain and the gut.
- x. Improving the gut-brain axis communications that influence better **moods, cognition, memory, overall mental functioning**.
(Gilbert, 2024)
- xi. Improving other organ axes:
 - Gut-Liver Axis
 - Gut-Skin Axis
 - Gut-Pancreas-Liver (Metabolic) Axis
 - Gut-Lung Axis
 - HPA (Hypothalamic-Pituitary-Adrenal) Axis

5. Why some experience the drops working faster than what others experience.

- We have established that the drops work rapidly due to the technology that produces ionically (negatively) charged, energy-active plant materials preserved in the drops.
- *The body's detection and communication systems direct them to go where they are needed most **according to the body's hierarchy of functional needs, and according to an individual's particular state of health.***

- Better, faster results depend on one's current state of health.
 - The more body systems that are malfunctioning (it all begins at the cell level), the longer it will take to do the necessary cellular repair work since there are more cells in the body than nutrients generally available at any given meal or lozenge doses provide.
 - Consistently providing the body with the Rapid Results Kit's greater array of nutrient factors makes available more corrective nutrients for restoring proper cell functioning that much sooner.
 - In the body's innate priority hierarchy, the most vital systems (brain and nervous system, heart, kidneys, lungs, liver), always take greater nutrient precedence over non-vital systems (cartilage and other connective tissues, muscles, hair-skin-nails).
 - A healthy person whose body systems are functioning normally (eating a variety of whole, fresh foods, avoiding nutrient-void, chemical-laden foodstuffs) and exercises regularly would have an enhanced experience of feeling even better, such as mental focus and learning capacity, and physical endurance and faster exercise recovery.

The Physiological "Hierarchy" of Phytonutrient Distribution

When phytonutrients (such as flavonoids, carotenoids, or polyphenols) circulate in the blood, they are prioritized and distributed through three priority level tiers.

Tier	Priority level	Biological Mechanism	Target Destinations
Tier 1	Vital Organ Perfusion	Driven by blood flow volume and auto-regulation. The heart and brain receive continuous, uncompromised blood flow regardless of nutritional status.	Brain, Heart, Liver, Kidneys
Tier 2	Receptor-Mediated Triage	Driven by biochemical demand. Stressed or inflamed tissues express higher levels of specific cell-surface receptors and signaling molecules (like cytokines), drawing nutrients to them.	Sites of inflammation, oxidative stress, or immune activation
Tier 3	Peripheral Storage & Excretion	Driven by baseline metabolic rates and chemical clearance pathways. Excess water-soluble phytonutrients are sent to the kidneys, while fat-soluble ones are absorbed into adipose tissue.	Adipose tissue, Skin, Renal system

(Goni, 2026)
